E - VOTER

SPREADING DEMOCRACY

What is E - VOTER ?

SPREADING DEMOCRACY

E - VOTER will provide next-generation election services using blockchain technology

Our mission is to bring complete transparency to the modern electoral system and empower every voice by providing the most technologically advanced, reliable, and secure voting mechanism in the world.

Problem Statement

- Malicious practices like EVM frauds have been an issue for decades.
- Due to the lack of ease of the voting process, voter turnout is less.
- Lack of trust among people regarding traditional voting process.

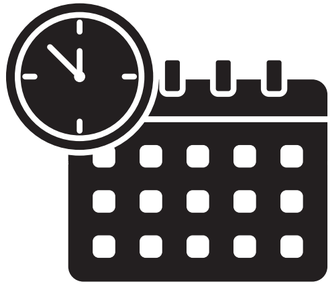
Our Solution

We are providing a platform which can solve all this problem. Here's how:

TRUSTLESS

In Blockchain transaction, there is no intermediary. Instead, miners are the service providers. Hence, they don't need to be regulated and supervised

EFFECTIVE



Less time consuming as realtime calculation of vote is possible (will not be disclosed publicly before voting period ends).

Our Solution

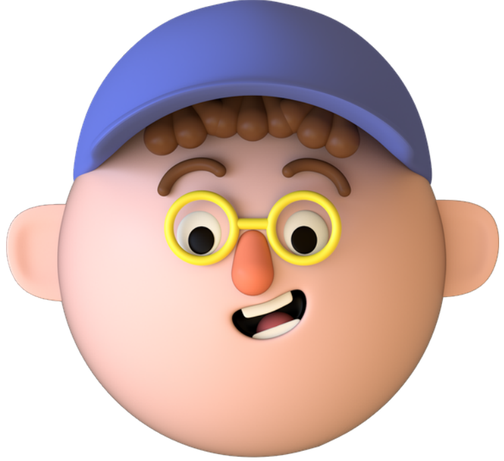
ANONYMITY

Vision is what success looks like for your company. It is what your company aspires to be in the future. It is how the world will look like once you've accomplished your mission.

ACCURATE

Faster and accurate vote results. Errors can occur whenever human interaction is involved. Blockchain technology removes human interaction and replaces it with code.

Main Features

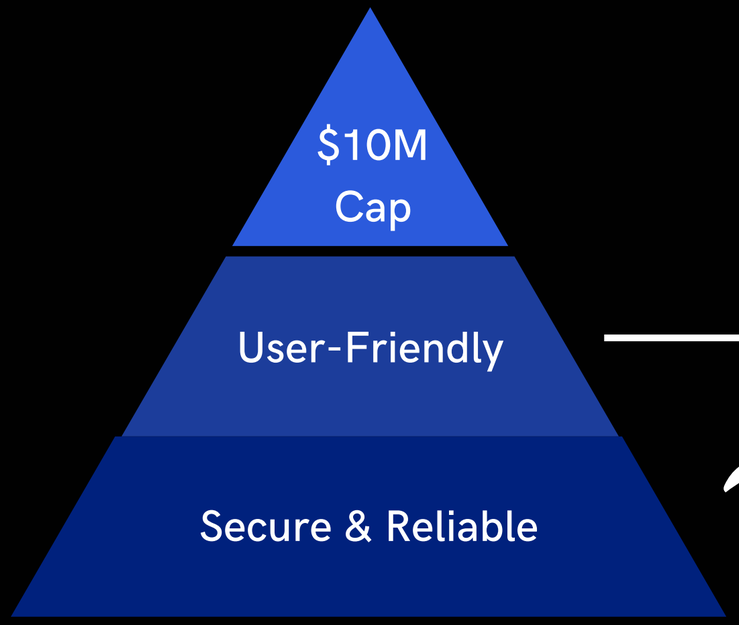


- Secure ✓
- Immutable ✓
- Faster ✓
- Transparent ✓
- Reduced cost ✓

- No VoterID required as it requires only AADHAAR API ✓

Business Model

E-Voter



both website & mobile app

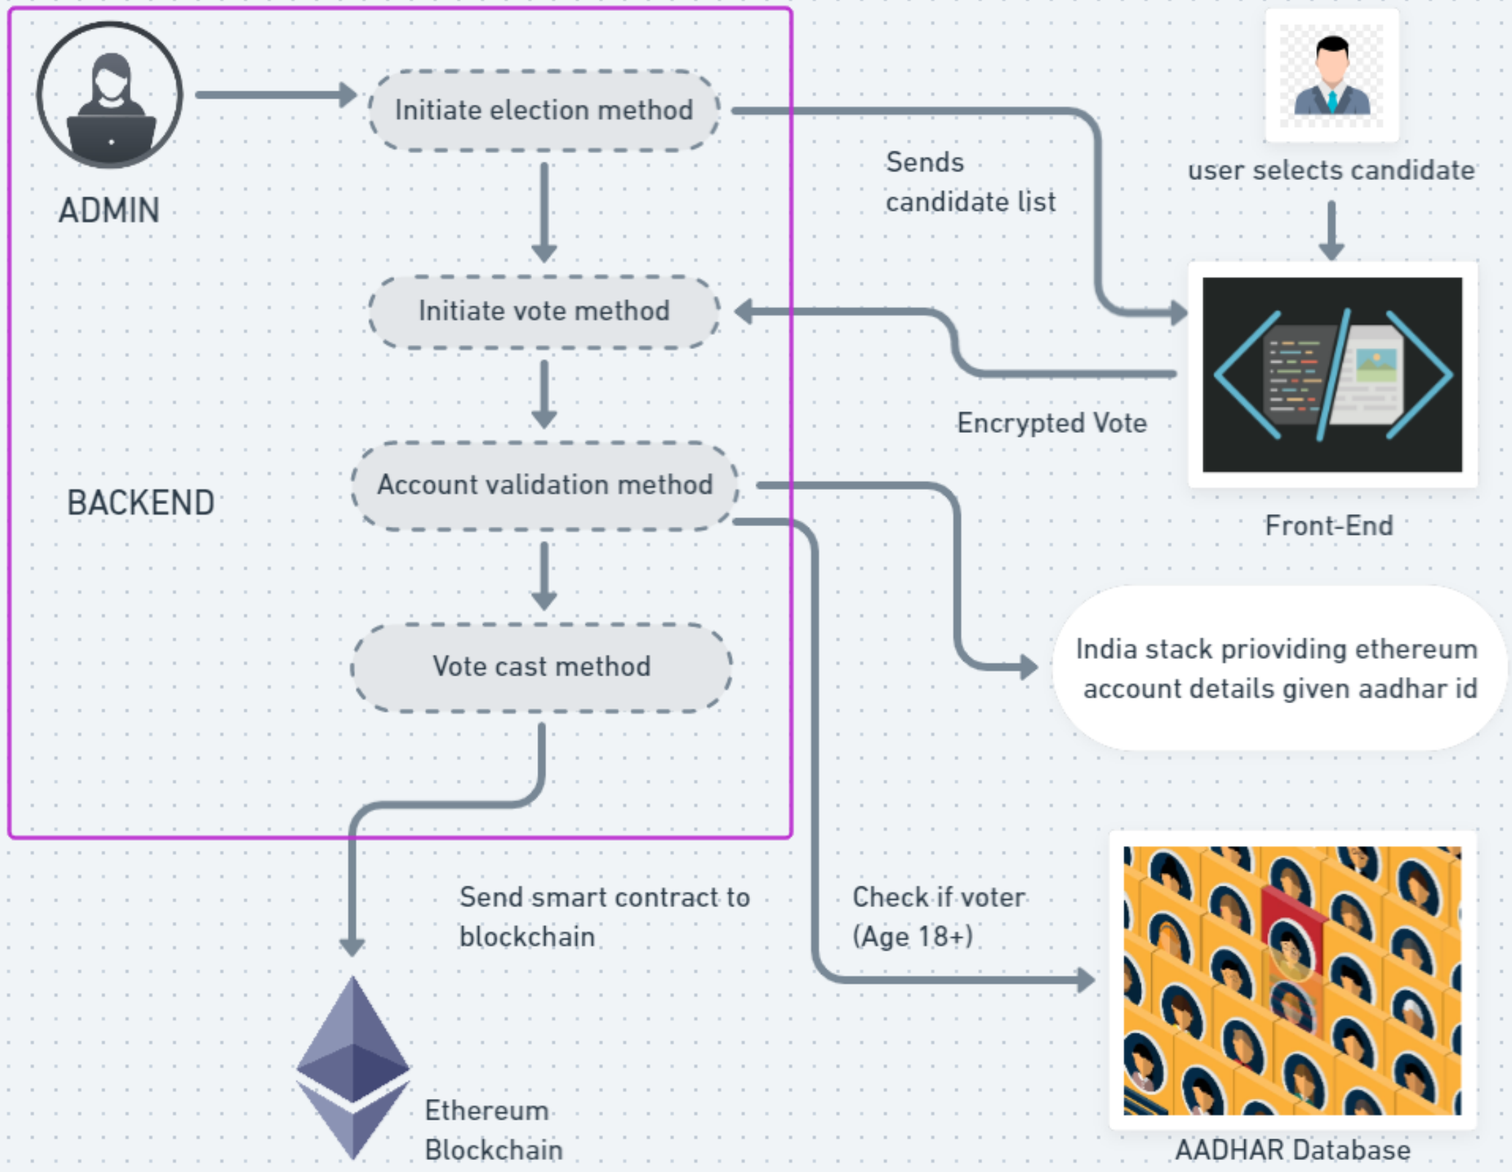
Blockchain Technology

99.9% Market Fit

Market

any country

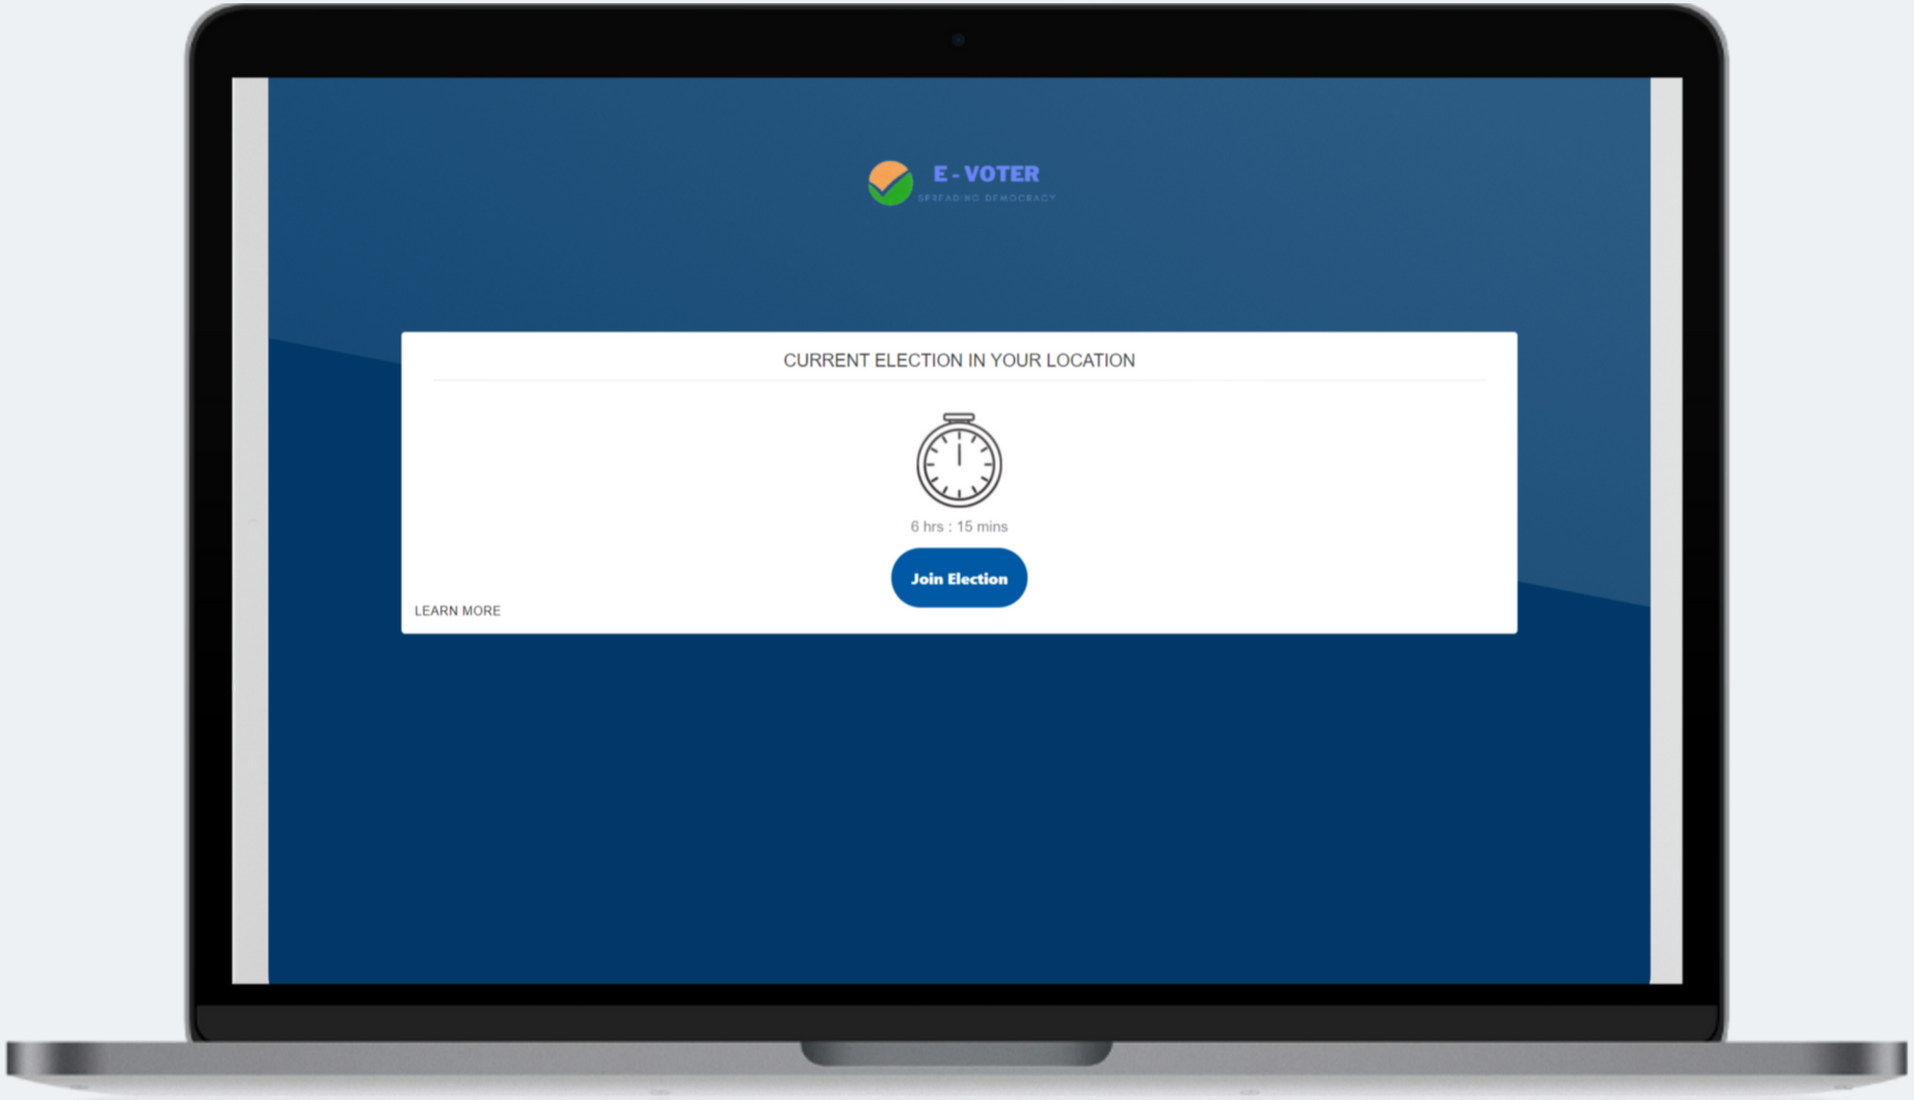
Working Flowchart



HTML CSS JS

TECH STACK USED

Client Experienc



Voters will be able to cast their votes using raspberry pi.

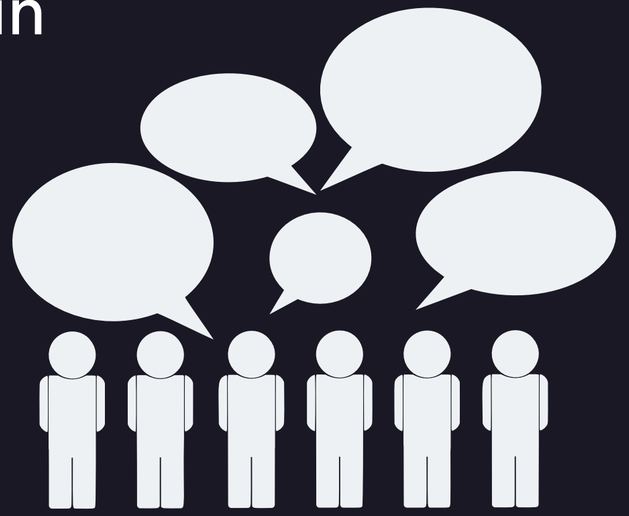
OpenCV

Before voting, face scan using openCV will making sure valid voter is present

vote click event will be shared with the ethereum network using web3js

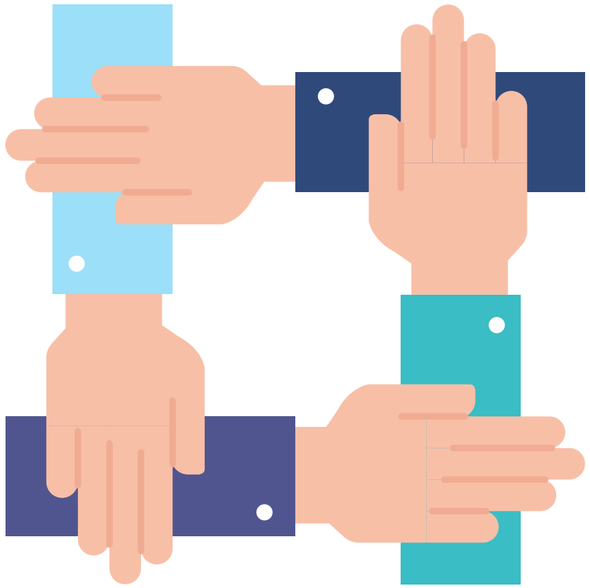
Our future plans

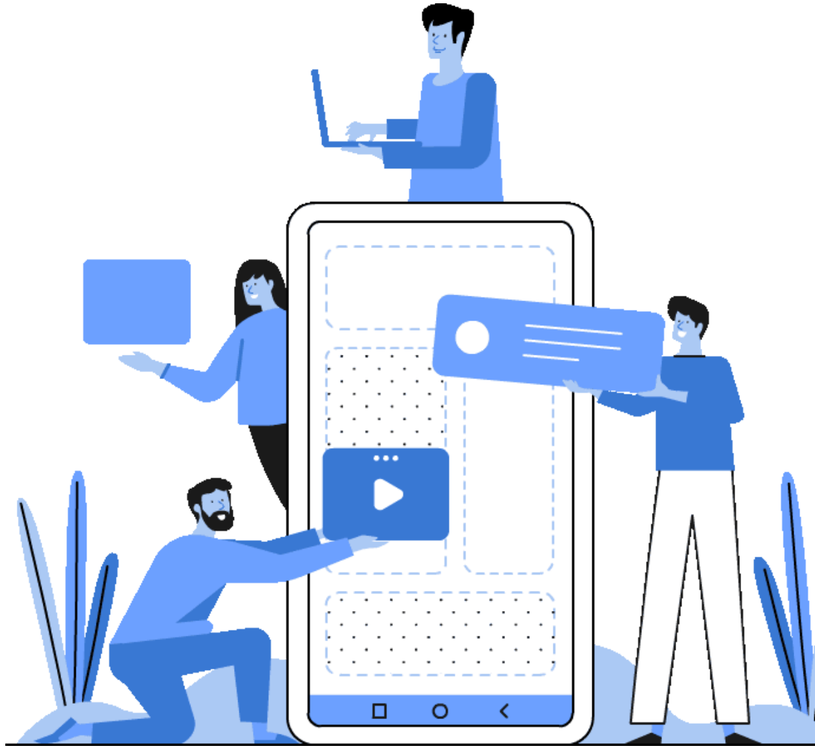
- Extend our services to corporate and other sectors where elections of any kind are held.
- Extend our services to media houses for conducting opinion polls, for this the same model that is used in actual voting process will be used as a web app.



Thank You

Hope this idea wins so that we can together make this product available to all.





Regards,

Team E - VOTER
